Admin & Super Admin User Guide

Revision 2.0 | Updated 25 October 2026 | 1 / 7

Start here: access and account safety

Scope and revision

October 2026 website operations. This replaces the May 2026 guide. It covers implemented behaviour; it does not certify that every optional database migration, email provider or scheduled job has been activated. The separate native mobile app project is outside this guide.

Sign in and session expiry

Open /club-admin/login. An active administrator profile and the appropriate role are required. Sessions expire after 10 minutes of inactivity; normal active work renews the inactivity window. After expiry, sign in again before submitting changes. If a page cannot load, reload it and return to login rather than repeatedly submitting a payment action.

My Profile and password

Use My Profile to edit your own name and phone. Email and role are read-only. Change Password requires the current password and a new password of 12-128 characters, followed by a fresh login. Sign out when finished.

Who can do what

Super Admin manages user roles and member maintenance. Admin manages most operating areas but cannot manage users. Both can confirm verified offline payments. Specialist roles are restricted to their assigned areas: news, tournaments/results/absences/live boards, gallery, FAQ, coaching, social posts, or communications. The sidebar and dashboard reflect those permissions. A member role alone has no admin access.

Guide map

Pages 2-7 cover dashboard analytics, membership, tournament registration, bank accounts and approvals, email/reminders, reports and publishing. Use the website sidebar to open each area. Routine work does not require changes to Supabase or Vercel.

Admin & Super Admin User Guide

Revision 2.0 | Updated 25 October 2026 | 2 / 7

Dashboard: growth, payments and filters

Choose the right view

The dashboard has Overview, Membership, Tournament registrations, Events, Enquiries and Absences tabs, subject to access permissions. Choose a 7, 30 or 90 day period and, where relevant, a tournament, then Apply. Reset clears the filters. Daily buckets use Pacific/Auckland time.

Membership

View retained member records, active paid/waived memberships, new registrations, daily growth and cumulative growth. Membership receipts and renewals are separate from tournament receipts. A renewal is a payment/validity extension, not a newly created member.

Tournament registrations

Filter to an event to see entries, new registrations, confirmed paid entries, pending entries, cancelled/refunded entries, daily/cumulative growth and tournament-only receipts. Status charts show current status, including for entries created during the selected period. A pending or refunded entry is not a confirmed player.

Events and enquiries

Events shows total, upcoming, open, completed and draft records, creation growth and events starting in the period. Creation dates and event dates are different measures. Enquiries shows received enquiries and current New/In progress/Responded/Closed status. The latest New queue can include older enquiries that still await action.

Absences and interpretation

Absences shows submitted reports, distinct submitted player identities, unreviewed reports and event/round summaries. Repeated reports are not additional players. Existing typed tournament names are matched only to a unique exact normalized title; unmatched/ambiguous names are flagged. Membership, events and enquiries stay club-wide when a tournament filter is selected. Cumulative growth counts retained records; receipt totals are not Stripe payouts or net bank settlement.

Admin & Super Admin User Guide

Membership registration, fees and renewals

New membership

The Join the Club form is for annual club membership, not tournament entry. DOB, gender and phone are required, with gender after DOB. Complete required contact/address fields, choose the membership options and quantities, and accept the terms. The server calculates fees from active Membership Fees & Options records.

Card or bank transfer

Card registration proceeds to Stripe Checkout. If bank transfer is configured, the player can choose it instead. The screen and acknowledgement email show the account name, number, fee and an M-prefixed payment reference. The membership remains Tentative - bank transfer until an admin verifies receipt. Do not promise active membership before confirmation.

Admin member records

Use Members to search by player name, registered email or membership ID. Filter by payment and membership status. Choose report columns such as Payment method and Bank reference when reconciling transfers. Check payment/retry email reconciles linked payments; it does not charge the player. Super Admin maintenance supports editing, deactivation and deletion; preserve records needed for payment history.

Fees and validity

Admin > Membership Fees & Options maintains fees in dollars, descriptions, active options and validity. Current active fees appear on new registration and renewal forms. Existing pending/completed payments retain their saved prices. For renewal, a calendar end month takes precedence over rolling validity months.

Find member and renew

Find Member / Renew Membership accepts membership ID or registered email, with optional exact surname. Family matches offer a player selector. Lookup can find paid or unpaid records; an unpaid record is not active membership. Eligible renewal checkout preserves the member ID, starts after existing expiry or today if expired, and extends validity once after verified payment. The separate renewal checkout remains Stripe-based. Cancelled/refunded memberships need admin review.

Revision 2.0 | Updated 25 October 2026 | 4 / 7

Tournaments, consent and public entries

Configure the event

In Tournaments or Calendar, set the correct event type, title, slug, status, start date, venue/address, format, rounds, entry fee/categories, capacity and registration availability. Use a positive configured fee for the current paid-registration flow. A calendar listing alone does not mean registration is open. Confirm the local time and public page after saving.

Club versus general/open

Club calendar events require the matching player to have active paid/waived club membership. General/open tournaments accept club members and visitors; membership is not required and all players pay the tournament fee. Club membership and tournament fees are separate. Show the NZCF membership note on tournament pages.

Registration requirements

Player name, email, phone, DOB and gender are required. Gender follows DOB. Collect NZCF/FIDE IDs and ratings where known; do not invent missing IDs. Registration links and Report Absence are available at tournament level; absence reporting does not cancel an entry or request a refund.

Photography and cancellation policy

The photo/publication question requires an explicit Yes or No; No permits registration. A Yes answer requires the appropriate named consenter/role and the existing guardian/child agreement rules for minors. Accepting the cancellation/refund policy is mandatory when the consent schema is available. Set a tournament-specific policy or use the default. The accepted wording and consent choices are saved as an audit snapshot; later policy changes do not rewrite earlier acceptance.

Entries and result links

Only paid and confirmed entries appear publicly. The player table supports alternating row shading, title, gender, linked FIDE ID, FIDE/NZCF ratings and club abbreviations. Sort by name or either rating and export an Excel workbook of public fields. DOB, email and phone are not part of the public export. Use Results for published results and external Vega links.

Admin & Super Admin User Guide

Bank accounts and verified payment approval

Add or edit an account

Open Payment Accounts. Enter account name, code/usage, NZ account number, purpose and Active status. The save logic supports canonical fields and detected legacy account_name, bank_account_name and bank_account_number fields. If a required-column error remains, retain the exact message for technical support; do not add fake values or repeatedly create the same account.

Select defaults

Tick Default bank account for membership and/or Default bank account for tournaments. Only one active default is allowed per type. Untick the previous default first when changing it. A tournament-specific selected account takes priority over the tournament default. An inactive account assigned to an event disables bank transfer there until corrected. With no default, a sole active account may be used; several accounts are never guessed. Deactivate an assigned account rather than deleting it.

Tentative entries

Bank details and an M/T-prefixed payment reference appear on screen and in the registration email. Use the exact reference to match the bank receipt. The entry stays pending internally and is labelled Tentative - bank transfer in reports. It is excluded from paid revenue and the confirmed public list. A tentative tournament entry does not reserve a place. Bank detection is manual; there is no bank-feed integration.

Confirm after receipt

Admin/Super Admin opens the green Confirm payment button for the player. Choose Bank transfer received, enter a reference/note of 5-500 characters, and tick that the full fee was verified and duplicate payments checked. Approval records the administrator, time, method, note and fee. Tournament approval also checks capacity and an existing confirmed player. Membership approval activates membership and assigns/reuses its ID.

Stripe, retries and refunds

Tournament manual approval also supports cash and other verified offline receipts. A completed Stripe payment must use Stripe verification; processing payments cannot be overridden as cash. Repeating a completed approval does not create another receipt. If membership activation/email fails, retry the existing confirmation, not a new payment. For duplicate paid entries, verify the actual full refund in Stripe, then reconcile the refunded entry; keep the valid paid entry. A partial or pending refund is not a full cancellation.

Admin & Super Admin User Guide

Emails, reminders and failure investigation

Registration versus confirmation

Registration received is an acknowledgement of a saved pending record. A separate confirmation follows verified payment. Bank-transfer acknowledgements include the saved bank instructions. An email failure does not prove a payment failure; check payment and Email Diagnostics independently.

Pending card reminders

The reminder migration, an enabled tournament setting, working email configuration and the scheduled job must be in place. Eligible pending/failed/expired card entries are checked against Stripe before sending. Reminders begin after 24 hours, repeat no sooner than every three days, and may have a final reminder within the last day, subject to the daily schedule and a minimum one-day gap. They stop before the earlier of tournament start or registration close.

No second payment

Reminder links resume payment for the existing entry. Verified paid/refunded/processing entries, a confirmed duplicate player and full events are suppressed. Bank-transfer registrations are excluded from Stripe reminders and payment-resume flows. If the bank shows a charge/transfer, tell the player not to pay again until reviewed.

Track sends and failures

Tournament Registrations offers Send due reminders to authorised admins, plus selectable Last payment reminder and Payment status explanation columns. Email Diagnostics records provider acceptance and failures; Vercel cron logs show job execution. Sent means accepted by the provider, not delivered to an inbox, opened or clicked. There is no email-open tracking. Correct settings before retrying a failed confirmation.

Communications tools

Email Templates controls reusable content; Member Notices and Bulk Email support authorised member communications. Preview recipients and wording before sending. Social Posts prepares drafts/share links; saving a draft is not proof that an external social network published it. Use Contact Enquiries to assign a current status and follow up; avoid leaving resolved enquiries marked New.

Revision 2.0 | Updated 25 October 2026 | 7 / 7

Reports, publishing and routine checks

Reports and exports

Filter Members and Tournament Registrations before selecting report columns and opening/downloading PDF or CSV. Tournament Name and Phone remain included in tournament reports. Payment method and Bank reference help match tentative transfers. The separate player/Vega report includes DOB and chess IDs for authorised administration; it is different from the public player list and is not automatically a native Vega tournament file.

Publish club content

News, coaching, AGM/notices and social content use the available editor/preview. Review title, links, date, summary, image and published status. Publish accurate minutes and decisions only from approved source material. Gallery, Live Boards and FAQ use their respective sidebar areas. Check the public page after saving; external links and social publishing may require separate actions.

Before an event

Check title, time zone, date/venue, fee, capacity, rating wording, registration/payment links, bank defaults, NZCF notice, photo consent and refund policy. Review pending transfers and card exceptions. Export the authorised player list needed by the arbiter and check missing ratings/IDs. Review absence reports by tournament and round.

After an event

Publish results and agreed photos consistent with recorded photo choices. Reconcile receipts/refunds and retain the audit. Prepare the Vega file and rating reports required by NZCF/FIDE using the arbiter workflow; a website registration export alone is not the final rating submission. Follow up outstanding enquiries and payments.

Help and important limits

Public contact: akcc.nzchess@gmail.com / 022 179 3499. Refresh and sign in again after session expiry. If bank transfer is disabled, ask technical support to verify its migration and active account/default. Do not place real bank numbers, secrets or member data in source control or public guides. Native mobile-app development is separate; a responsive website or home-screen shortcut is not an App Store release.
